```c
#include <stdio.h>

class Triangle {
public:
    void triangle() {
        printf("I am a triangle\n");
    }
};

class Isosceles : public Triangle {
public:
    void isosceles() {
        printf("I am an isosceles triangle\n");
    }
};

class Equilateral : public Isosceles {
public:
    void equilateral() {
        printf("I am an equilateral triangle\n");
    }
};

int main() {
    Equilateral eq;
    eq.equilateral();
    eq.isosceles();
    eq.triangle();
    return 0;
}
```
